

ABSTRACT OF THE DISCLOSURE

764,502

5 A rear-view unit for motor-vehicles, in particular commercial vehicles,
has at least one external rear-view mirror with a housing and at least
one mirror glass pivotably arranged in the housing. Electric servomotors
are provided to pivot the mirror glasses about a positioning axis.
Furthermore, heatings for the mirror glass may be available. Switches
are provided to actuate the servomotors and the heating. So as to reduce
the wiring and to ensure the subsequent equipment of adjustable mirror
10 glasses with servomotors, the switches are connected to a transmitting
unit and the servomotors are connected to a receiving unit of a multiplex
system arranged in the housing.
